DSC 3203 : SERVICE OPERATIONS MANAGEMENT

The Course Relevance:

The ever increasing role and presence of the Service Sector:

Today the service sector is dominating the economies of most developed nations. In the United States, service sector accounts for over three fourth of the GDP and almost 85% of employment. In Singapore, the services sector, a vital engine of growth, contributes to over 75% of employment and to over 60% of the GDP.

In today’s environment almost each and every manufacturing firm also as a part of business strategy has specific business units providing service operations. This is in order to have competitive edges against its competitor and increase customer satisfaction.

Importance of operational efficiency in Services:

Under these circumstances, while the efficiency is one key ingredient for a successful firm, for service industry this is especially true wherein non-tangible aspects play key role in customer satisfaction.

Thus understanding the concepts of how to successfully manage service operations will provide a significant advantage to graduates who are very likely to find themselves employed by a service based or service-oriented firm, in the present environment.

Service Operations Course Focus:

Two aspects which will form the background of the course are:

- the importance of aligning the design and management of services with the marketing strategy of the firm and
- the impact and management of variability in services.

The course will focus on

1. Providing students with an understanding of how to analyze service operations, how decision making differs and how implementation hurdles are addressed while operating services.

2. How strategic vision is a necessity for successful service companies, whether they are banks, airlines, hospitals, utilities, retailing, restaurants, or theatre groups. Consequently, the course will explore basic elements of the service operations strategy. These concepts will be illustrated with wide range of examples from health care, financial services, retail, delivery services, airlines, etc.
3. Exposing the students to a variety of quantitative tools and models that will help us to manage in this complex environment.

4. how the digital internet era has started playing in redefining service operations.

**Planned class coverage**

A variety of service operational decision issues like: how to simulate service operations, location decision, layout considerations, labour and capacity planning/measurement, pricing strategy and differential pricing will be addressed.

The class coverage can be broadly categorized as:

- managing variability in services,
- the operations/marketing interface,
- demand and revenue management and
- service quality and human resource issues

Students will experience how to model service operations and take important decisions using spreadsheet tools.
